COURSE 2 · SECTION 6 · EXERCISE

Clean the change-log exports

Section 6 (videos S06.1 and S06.2) · Clean the change-log exports

Start: Section07_1_Start.pbix or your Engxtech_S06_2.pbix; save a copy as Engxtech_S06_Exercise.pbix

Time: about 25 min

Data: the course data folder

DESIGN QUESTION

How many engineering changes are really in the log once the 21 monthly exports are combined and cleaned, and which part is the primary part of the most changes?

Extra practice. This exercise is extra practice: a longer task than the video's short "Your turn" questions, which are answered in the video itself. Do it after the video, in a copy of your file.

The PLM tool exports the change log once a month as Changes_YYYY-MM.csv. Some months were exported twice, and part numbers were typed in different ways (p300, P-300, 'P300 '). In the video you built the query Changes on the folder parameter ChangeFolder.

Your tasks

1. In your exercise copy, open Power Query (Home > Transform data). Check the parameter **ChangeFolder** (Manage Parameters) and that the Source step of Changes reads Folder.Files(ChangeFolder).
2. Click the Applied Steps of Changes one by one and read the row count in the status bar: after the combine (Changed Type or Set text types) and after Remove exact duplicates.
3. Click the step Set cost (en-US), just before Trim part. Turn on Column profiling based on entire data set. How many PrimaryPart values are not one of the 8 clean part IDs?
4. Click the last step. How many distinct PrimaryPart values are left?
5. Close & Apply. On the Change log check page, count changes by PrimaryPart and by Status.

Check your answer

Check	Expected
CSV files combined	**21**
Rows after combine	**184**
Exact duplicate rows	**6**
Rows after Remove Duplicates	**178**
PrimaryPart values typed differently (fixed)	**14**
Distinct PrimaryPart values after cleaning	**8**
Changes with PrimaryPart = P300	**26**
Status = Closed	**154**

Hint. Row counts show at the bottom left of the Power Query editor. Turn on View > Column profiling based on entire data set, or it only profiles the first 1,000 rows. Clicking an earlier step only shows the data at that point; it changes nothing.

Stuck? The worked solution with the full DAX and M is in Solutions/S06_Solution.pdf.
